

Company objective

The Company's investment objective is to achieve long term capital growth by investing in companies domiciled or listed in, or exercising the predominant part of their economic activity in, less developed countries. These countries (the "Frontiers Universe") are any country which is neither part of the MSCI World Index of developed markets nor one of the eight largest countries by market capitalisation in the MSCI Emerging Markets Index as at 1 April 2018 being: Brazil, China, India, Korea, Mexico, Russia, South Africa and Taiwan.

Key risk factors

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Overseas investments will be affected by currency exchange rate fluctuations.

The Company invests in a number of developing emerging markets ("Frontier Markets"). Frontier Markets tend to be more volatile than more established markets and therefore present a higher degree of risk as they are less well regulated and may be affected by political and social instability and other factors. These markets do not generally operate as efficiently as those in more developed countries. Corruption remains a significant issue across frontier markets and could have a material adverse effect on the value of investments. In addition, potential irregularities in market operations relating to settlement of securities transactions, custody of assets and insolvency proceedings presents a material risk of loss of assets belonging to the Company. Investments may be subject to severe liquidity constraints which mean that securities may trade infrequently and/or volume may be concentrated in a small number of companies and across a limited number of investors and financial intermediaries. As a result, changes in the value of investments may be more unpredictable. In certain cases, it may not be possible to sell the security at the last market price quoted or at a value considered to be fairest.

BlackRock Frontiers Investment Trust plc

May 2026

The information contained in this release was correct as at 31 May 2026. Information on the Company's up to date net asset values can be found on the London Stock Exchange Website at: <https://www.londonstockexchange.com/exchange/news/market-news/market-news-home.html>

Fund information (as at 31/05/26)

US Dollar:	
Net asset value - capital only:	245.36c

Key risk factors Continued

BlackRock intends to invest in a representative number of the frontier markets although may not be able to achieve exposure in certain markets due to Office of Foreign Asset Control (OFAC) and United Nations (UN) sanctions and other counterparty considerations. Exposure is achieved where permitted by all practicable means including (but not limited to) equities listed on exchanges in frontier markets and derivatives thereof, American Depositary Receipts (ADRs), and Global Depositary Receipts (GDRs) and of companies with operations in frontier markets but whose equities are listed on developed market exchanges.

The Company may from time to time utilize gearing. A fuller definition of gearing is given in the Glossary.

Non-Mainstream Pooled Investments (NMPI) Status

The Company currently conducts its affairs so that its securities can be recommended by Independent Financial Advisers to ordinary retail investors in accordance with the FCA's (Financial Conduct Authority) rules in relation to NMPI and intends to continue to do so for the foreseeable future. The securities are excluded from the FCA's restrictions which apply to non-mainstream pooled investments because they are shares.

Performance

The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at blackrock.com/uk/brfi

A fuller definition of ongoing charges, which includes the annual management fee, is given in the Glossary. Details of the management and performance fees are given in the fund information table overleaf. The performance of the Company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

Cumulative performance (as at 31/05/26)

Sterling	1M%	3M%	1Y%	3Y%	5Y%	Since launch * %
Share price	2.4	-6.1	28.3	63.8	102.3	248.2
Net asset value	1.6	-5.6	21.3	44.0	81.2	241.0

Benchmark (NR)**	0.4	-2.4	19.7	40.7	39.8	98.3

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Index performance returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index.

* 17 December 2010.

** The Company's benchmark changed from MSCI Frontier Markets Index to MSCI Frontier + Emerging ex Selected Countries Index (net total return, USD) effective 1/4/2018.

The above Net Asset Value (NAV) performance statistics are based on an NAV with income included with any income reinvested on the ex-dividend date, net of ongoing charges and any applicable performance fee. Share price performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date.

Comments from the Portfolio Managers

Please note that the commentary below includes historic information in respect of the performance of portfolio investments, index performance data and the Company's NAV and share performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results.

The Company's NAV returned +0.8% in May, outperforming the MSCI Frontier + Emerging ex Selected Countries Index ("Benchmark Index"), which returned +0.4%. For reference, the MSCI Emerging Markets Index returned +9.7% while the MSCI Frontier Markets Index returned +0.6% over the same period. All performance figures are on a US Dollar basis with net income reinvested.

Within our universe, Peru (+11.9%) and Greece (+10.0%) were among the standout performers. Peru is mid Presidential election with right wing candidate Keiko Fujimori expected to win (just), while Greece continued to benefit from its expected reclassification to developed market status in May 2027. On the other side, Gulf markets lagged as softer oil prices and a rotation of investor flows toward technology-oriented markets elsewhere in EM weighed on sentiment.

Stock selection across a variety of countries and sectors did well in May. Argentina's state-controlled oil and gas company YPF (+17.3%) was the largest contributor to returns. The stock rallied after a Q1 earnings beat, driven by strong shale production growth from the Vaca Muerta fields, and continued progress on the Vaca Muerta Sur oil export pipeline – a key piece of infrastructure needed to unlock Argentina's shale export potential. Another strong performer was UzNIF (+14.2%), an Uzbek SOE privatisation vehicle, which rose following a successful IPO that highlighted growing confidence in the country's economic reform agenda. Thai industrial real estate developer Amata Corporation (+23.2%) also contributed positively after reporting strong first-quarter results. Net profit increased 67% year-on-year, supported by higher industrial land sales and continued demand from technology and data-centre customers.

On the flipside, Philippines based online gaming company DigiPlus (–22.8%) was the largest detractor as softer consumer sentiment weighed on gaming activity and transaction volumes. However, management are confident they will see month-on-month improvement through 2026, and we retain conviction at current levels. Kazakhstan-based Kazatomprom (–17.7%) also detracted after a sell-side downgrade. Mobile World Investment Corp (–9.5%), a Vietnamese retailer, was another detractor despite reporting strong first-quarter results.

We made few changes over the month. We exited Turkish bank Akbank on concerns that elevated oil prices could pressure Turkey's targeted disinflation process and hurt the balance of payments. We also trimmed our exposure to Egypt's Commercial International bank as higher oil prices are similarly a significant negative input to both inflation and trade balance in Egypt. Elsewhere, we participated in the IPO of UzNIF, which is a Templeton-managed vehicle listing Uzbek state-owned enterprises. We see upside from regulatory reform and re-rating of several undervalued assets within the portfolio.

Looking ahead, we remain constructive on the outlook for smaller emerging and frontier markets. Valuations across our investment universe remain attractive, both in absolute and relative terms. Many of these markets are still under-researched, and we believe this creates fertile ground for finding high-conviction, alpha-generating opportunities.

Unless otherwise stated all data is sourced from BlackRock as at 31 May 2026. All data points in US Dollar terms unless otherwise specified.

¹ MSCI as at 31 May 2026.

Glossary of terms

Alternative Investment Market (AIM)

AIM is the London Stock Exchange's international market for smaller growing companies. The AIM market has no restrictions on market capitalisation, and financial reporting is more flexible than for companies listed on the main market of the London Stock Exchange.

CFD (Contracts for Difference)

Under a CFD contract the seller undertakes to pay to the buyer the difference between the current value of an asset and its value at a specified end date; this may be a positive or negative amount dependant on how the price has moved. A CFD contract may be used to profit from the price of the underlying asset falling as well as rising; if the buyer enters into a contract where the transaction will generate a profit if the price of the underlying holding falls, this is called a short position. A CFD contract also enables the Company to take advantage of price movements by paying only a small margin and without the cost outlay of purchasing the underlying stock. CFD contracts are not without risks. They may generate losses as well as profits if the price of the underlying asset moves in an unfavourable direction. CFDs also involve counterparty risk – the risk the CFD provider or another counterparty to a trade fails to fulfil their obligations – and liquidity risk, which means market conditions/the mechanics of trading could alter in such a way that trades cannot be made.

Discount/premium

Investment trust shares frequently trade at a discount or premium to NAV. This occurs when the share price is less than (a discount) or more than (a premium) to the NAV. The discount or premium is the difference between the share price (based on mid-market share prices) and the NAV, expressed as a percentage of the NAV.

Discounts and premiums are mainly the consequence of supply and demand for the shares on the stock market.

Gearing

Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favourable situation or a particularly attractive stock without having to sell existing investments. Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

Net yield

The net yield is calculated using total dividends declared in the last 12 months (as at date of this factsheet) as a percentage of month end share price.

NAV (Net Asset Value)

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

Ongoing charges ratio

Ongoing charges (%) =

$$\frac{\text{Annualised ongoing charges}}{\text{Average undiluted net asset value in the period}}$$

Ongoing charges are those expenses of a type which are likely to recur in the foreseeable future, whether charged to capital or revenue, and which relate to the operation of the investment company as a collective fund, excluding the costs of acquisition/disposal of investments, financing charges and gains/losses arising on investments. Ongoing charges are based on costs incurred in the year as being the best estimate of future costs and include the annual management fee.

Treasury shares

Treasury shares are shares that a company keeps in its own treasury which are not currently issued to the public. These shares do not pay dividends, have no voting rights and are not included in a Company's total issued share capital amount for the purpose of calculating percentage ownership. Treasury stock may have come from a repurchase or buyback from shareholders, or it may have never been issued to the public in the first place. Treasury shares may be reissued from treasury to the public to meet demand for a company's shares in certain circumstances.

Risk Warnings

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Trust specific risks:

Gearing risk. Investment strategies, such as borrowing, used by the Trust can result in even larger losses suffered when the value of the underlying investments fall.

Emerging Europe. Emerging market investments are usually associated with higher investment risk than developed market investments. Therefore, the value of these investments may be unpredictable and subject to greater variation.

Exchange rate risk. The return of your investment may increase or decrease as a result of currency fluctuations.

Frontiers. Frontier markets are generally more sensitive to economic and political conditions than developed and emerging markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets and failed/delayed delivery of securities or payments to the Fund. There may be larger fluctuations to the value of your investment and increased risk of losing your capital.

Derivative Risk general. The Fund uses derivatives as part of its investment strategy. Compared to a fund which only invests in traditional instruments such as stocks and bonds, derivatives are potentially subject to a higher level of risk.

Counterparty Risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Non-investment grade risk. Non-investment grade fixed income securities are more sensitive to changes in interest rates and present greater 'Credit Risk' than higher rated fixed income securities.

Important Information

Issued by BlackRock Investment Management (UK) Limited, authorised and regulated by the Financial Conduct Authority. Registered office: 12 Throgmorton Avenue, London, EC2N 2DL. Tel: + 44 (0)20 7743 3000. Registered in England and Wales No. 2020394. For your protection telephone calls are usually recorded. BlackRock is a trading name of BlackRock Investment Management (UK) Limited. Please refer to the Financial Conduct Authority website for a list of authorised activities conducted by BlackRock.

This document is marketing material. The Company is managed by BlackRock Fund Managers Limited (BFM) as the AIFM. BFM has delegated certain investment management and other ancillary services to BlackRock Investment Management (UK) Limited. The Company's shares are traded on the London Stock Exchange and dealing may only be through a member of the Exchange. The Company will not invest more than 15% of its gross assets in other listed investment trusts. SEDOL™ is a trademark of the London Stock Exchange plc and is used under licence.

Net Asset Value (NAV) performance is not the same as share price performance, and shareholders may realise returns that are lower or higher than NAV performance.

BlackRock Frontiers Investment Trust plc currently conducts its affairs so that their securities can be recommended by IFAs to ordinary retail investors in accordance with the Financial Conduct Authority's rules in relation to nonmainstream investment products and intend to continue to do so for the foreseeable future. The securities are excluded from the Financial Conduct Authority's restrictions which apply to non-mainstream investment products because they are securities issued by investment trusts. Investors should understand all characteristics of the funds objective before investing.
