Fund Manager commentary

Investment environment

Asian equities rose sharply in April, led by soaring chipmaker stocks and improved sentiment towards geopolitical risks. In particular, South Korean equities surged and, to a lesser extent, Taiwanese equities also rose, spurred by large gains in the shares of key technology firms. Both markets also benefited from stronger-than-expected first-quarter GDP growth, driven by continued demand for artificial intelligence (AI)-related infrastructure.

Chinese equities rose over the period but underperformed the regional index. The gains, which made up for the falls seen in March, were driven by improved investor sentiment towards geopolitical risks and AI-related stocks. First-quarter economic expansion of 5.0% year on year in China was higher than anticipated. Inflation was slightly weaker than predicted in March, while producer prices increased for the first time in more than three years.

Indian equities rose, partly recovering from March's steep falls. However, the rise in oil prices and further weakness in the Indian rupee clouded the economic outlook.

Australian shares rose, with the strength of the Australian dollar boosting returns in sterling and US dollar terms. Inflation picked up in March, which underpinned expectations that the Reserve Bank of Australia may announce another interest-rate hike in May.

Portfolio review

The portfolio has a bias towards value-style stocks and income. Therefore, the key detractors included the underweight positions in heavyweight constituent stocks such as Samsung Electronics, SK Hynix and Taiwan Semiconductor Manufacturing Company (TSMC). Their share prices rose to all-time highs and continued to be supported by strong earnings momentum, with all three companies announcing record first-quarter earnings.

These losses were partially offset by our high-conviction position in Samsung Electronics preference shares, which were trading at a significant discount to the ordinary shares while paying a high dividend. Other substantial overweight positions relative to the benchmark that performed well were chip designer MediaTek and contract chipmaker United Microelectronics Corp (UMC). Shares in both companies reached record levels in April amid renewed enthusiasm around AI-related investment, which underpinned the broad-based rally in the semiconductor sector.

During the month, we exited the positions in Bank Negara Indonesia (BNI) and FinVolution Group.

Manager outlook

Asian investors have faced several exogenous risks in recent years, with conflict in the Middle East the most recent potential shock. However, the growth drivers of these markets are broad based and have already demonstrated resilience in uncertain times. They stretch across technology, financials, infrastructure, consumer

and wide-ranging corporate reform. Asia has a unique position as a hub for technology supply chains, given the region's comparative advantage in hardware and semiconductor manufacturing. There are also opportunities for financials, with millions of consumers being brought into the banking system, accelerated by digital roll-outs. Infrastructure spending has continued to benefit from significant power demand boosted by AI. In addition, widespread corporate reform in South Korea, China and Singapore has been enhancing shareholder returns.

We believe these trends, in combination with faster-than-expected dividend growth, may offer a compelling and unique opportunity for investors. While there are signs of significant uncertainty ahead, we think these investment themes will stand the test of time. This could bode well for investors seeking high income against the backdrop of structural growth in the region.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company has significant exposure to Emerging Markets, which tend to be less stable than more established markets. These markets can be affected by local political and economic conditions as well as variances in the reliability of trading systems, buying and selling practices, and financial reporting standards.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- The portfolio allows the manager to use options for efficient portfolio management. Options can be volatile and may result in a capital loss.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change.
