Commentary at a glance

Performance

In the month under review the Company's NAV total return was 4.3% and the 80% FTSE All-Share Index/20% ICE BofA Sterling Non-Gilts Index total return was 3.3%.

Contributors/detractors

Holdings in Johnson Matthey and Chemring benefited performance, while gearing was also beneficial given the more positive market backdrop.

Outlook

The portfolio is well diversified, owning what we see as more resilient businesses as well as cyclical companies that we think are attractively valued.

Fund Manager commentary

Investment environment

The FTSE All-Share Index rose 4.1% during May as improved global trade relations, some positive corporate results and cautious optimism about the economy put the index within touching distance of its record high.

The UK announced an agreement to forge closer ties with the European Union (EU), including on trade, and also signed a trade pact with the US. This boosted investor sentiment.

The Bank of England (BoE) lowered its benchmark rate by 25 basis points (bps) to 4.25%. GDP growth of 0.7% over the first quarter was slightly better than predicted, and was up from 0.1% expansion in the previous quarter.

However, annual inflation increased to a worse-than-anticipated 3.5% in April - the highest in more than a year - from 2.6% in March. This was in part due to energy and water price rises. The news prompted investors to trim their expectations for interest rate cuts.

Meanwhile, retail sales increased unexpectedly strongly in April, with the rise largely attributed to favourable weather. Sterling gained further against the US dollar, hitting a more-than-three-year high as it benefited from economic optimism and unease about the US fiscal position and trade policy.

Mid-cap companies outperformed with the FTSE 250 Index returning 6.1% versus the FTSE 100 Index which was up 3.8%.

Cyclical sectors outperformed, given the improvement in global trade relations, with industrials, basic materials and consumer discretionary outperforming. Defensive sectors lagged with consumer staples, utilities and healthcare all underperforming.

Portfolio review

The equity holdings in Johnson Matthey, Chemring and M&G benefited performance. Chemical company Johnson Matthey announced the sale of its Catalyst Technologies division to Honeywell for £1.8 billion, which was materially more than analysts estimate its value to be. Defence contractor Chemring continued to benefit from increased geopolitical tensions as talks over a Russia-Ukraine ceasefire made no progress. M&G announced a long-term strategic partnership with Japanese insurer Dai-ichi Life, which is expected to deliver at least \$6 billion of new business flows for M&G, while Dai-ichi will also acquire a 15% stake in the company.

Elsewhere, the equity holdings in Imperial Brands and Sanofi were detrimental to performance. Shares in Imperial Brands sold off after the well-regarded CEO announced he was retiring. After meeting the Chair, we were reassured that the appointment of the current CFO to succeed him was part of a well-planned succession policy and that he had all the necessary skills to execute the current strategy. French pharmaceutical company Sanofi reported a disappointing trial result for its pipeline drug for lung disease.

Trading activity was low during the month but we added to the positions in Whitbread, Bunzl and DCC where we believe the valuations were particularly attractive at the time of purchase.

Manager outlook

Although the US has so far temporarily suspended the worst tariff levels, the uncertainty this has caused, as well as the increase in disruption and cost of global trade, seems likely to slow global economic growth. In the UK, the economy is slowly starting to show signs of recovery, while further interest rate cuts could see an improvement in consumer confidence. We also think that valuations in the UK are attractive with the equity market trading at a discount to both its own long-term average and versus overseas indices. We therefore maintain a balanced approach, owning what we see as more resilient businesses as well as cyclical companies that we think are attractively valued.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.
