

Share price performance (total return)

Dividend history (pence/share)

Please note that this chart could include dividends that have been declared but not yet paid.

Please remember that past performance does not predict future returns. The value of an investment and the income from it can rise as well as fall as a result of market and currency fluctuations, and you may not get back the amount originally invested. Please refer to the glossary for the definition of share price total return.

Fund Manager commentary

Investment environment

The FTSE All-Share Index rose 0.7% during June as the US and Iran signed an initial peace deal. Investor sentiment improved despite news that Prime Minister Keir Starmer was expected to resign, following the Labour Party's large losses in May's local elections.

The Bank of England (BoE) left interest rates on hold and lowered its inflation expectations for this year, which reduced the likelihood that it will tighten monetary policy. Inflation was unchanged at a lower-than-forecast 2.8% in May, while retail sales grew more strongly than anticipated in the same month, largely due to warmer weather. The unemployment rate unexpectedly edged down to 4.9% in the three months to the end of April. Sterling weakened further against the US dollar, as easing pricing pressures and the BoE's wait-and-see approach reduced the likelihood of an interest rate hike.

The FTSE 100 Index rose 1.0% during the month, outperforming the mid-cap FTSE 250 Index, which fell 1.5%. The best-performing sectors included real estate, consumer discretionary and consumer staples, while basic materials, telecommunications and energy lagged.

Portfolio review

The equity holdings in Standard Life, Bunzl and NatWest were positive for performance. Shares in Standard Life (previously Phoenix) outperformed as investors started to appreciate the potential benefits of the proposed

acquisition of Aegon UK. Bunzl's shares performed well following a strong trading statement, in which management upgraded full-year guidance (forecasts), driven by improving volumes in North America. This reinforced confidence that earnings momentum is recovering after a difficult 2025. NatWest's shares outperformed as improved sentiment following an initial peace deal between the US and Iran supported more cyclical stocks (those that tend to do well when economic growth is stronger), and especially financials.

Elsewhere, equity holdings in Bodycote and Johnson Matthey detracted. Bodycote underperformed following Apollo's decision to withdraw its takeover approach, removing a significant source of support for the shares. Johnson Matthey's shares underperformed as investors grew concerned over the progress of the disposal of its Catalyst Technologies divisions, while falling platinum group metals (PGM) prices also weighed on the shares.

During the month, we added to the holdings in 3i, British Land and Persimmon.

Manager outlook

Although geopolitical tensions remain in the Middle East, if a peace deal can be agreed between Iran and the US, we think the oil price is likely to remain close to pre-conflict levels. This could lead to lower inflation and reduce expectations of interest rate rises.

A change in the UK Prime Minister could increase investor nervousness over plans for tax and spending. However, we think UK consumers, businesses and the banking system remain in strong financial health, which has supported the UK economy through periods of uncertainty in recent years. Also, share prices in the UK still appear attractive to us. We maintain a balanced approach, owning what we see as typically more resilient businesses as well as cyclical companies that we believe are attractively valued.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change. Nothing in this document is intended to or should be construed as advice. This document is not a recommendation to sell or purchase any investment. It does not form part of any contract for the sale or purchase of any investment.
