

JPMorgan China Growth & Income plc

ISIN GB0003435012

Sedol 0343501

Bloomberg JCGI LN

Reuters JCGI.L

Objective:

The Company aims to provide long-term capital growth from investment in 'Greater China' companies which are quoted on the stock exchanges of Hong Kong, China and Taiwan or which derive a substantial part of their revenues or profits from these territories. The Company makes quarterly distributions, which are announced to shareholders for the next four quarters at the beginning of each financial year. On aggregate, the intention is to pay dividends totaling at least 4% of the Company NAV on the last business day of the preceding financial year. The Company has the ability to use borrowing to gear the portfolio up to a maximum level of 20% of shareholders funds. Gearing may magnify gains or losses experienced by the Company.

Portfolio manager(s)	Dividends paid	Potential gearing range

ESG information

ESG approach - Integrated

ESG Integration is the systematic inclusion of financially material ESG factors, alongside other relevant factors, in investment analysis and investment decisions with the goals of managing risk and improving long-term returns. ESG integration does not by itself change this product's investment objective, exclude specific types of companies or constrain its investable universe. This product is not designed for investors who are looking for a product that meets specific ESG goals or wish to screen out particular types of companies or investments, other than those required by any applicable law such as companies involved in the manufacture, production or supply of cluster munitions. ESG integration does not imply that the Fund is marketed or authorised as an ESG product in any jurisdiction where such authorisation is required.

Key risks

Exchange rate changes may cause the value of underlying overseas investments to go down as well as up.

Investments in emerging markets may involve a higher element of risk due to political and economic instability and underdeveloped markets and systems. Shares may also be traded less frequently than those on established markets. This means that there may be difficulty in both buying and selling shares and individual share prices may be subject to short-term price fluctuations.

This Company may use derivatives for investment purposes or for efficient portfolio management.

External factors may cause an entire asset class to decline in value. Prices and values of all shares or all bonds and income could decline at the same time, or fluctuate in response to the performance of individual companies and general market conditions.

This Company may utilise gearing (borrowing) which will exaggerate market movements both up and down.

This Company may also invest in smaller companies which may increase its risk profile.

The share price may trade at a discount to the Net Asset Value of the Company.

The single market in which the Company primarily invests, in this case China, may be subject to particular political and economic risks and, as a result, the Company may be more volatile than more broadly diversified companies.

The Company may invest in China A-Shares through the Shanghai-Hong Kong Stock Connect program which is subject to regulatory change, quota limitations and also operational constraints which may result in increased counterparty risk.

General Disclosures

Investment is subject to documentation. The Annual Reports and Financial Statements, AIFMD art. 23 Investor Disclosure Document and PRIIPs Key Information Document can be obtained free of charge in English from JPMorgan Funds Limited or www.jpmmam.co.uk/investmenttrust.

Others	-14.8 -18.2
Cash	3.5 +3.5

Figures shown may not add up to 100 due to rounding.

ongoing charges and any applicable fees, with any income reinvested, in GBP.

NAV is the cum income NAV with debt at fair value, diluted for treasury and/or subscription shares if applicable, with any income reinvested. Share price performance figures are calculated on a mid market basis in GBP with income reinvested on the ex-dividend date. The performance of the company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

Indices do not include fees or operating expenses and you cannot invest in them.

Prospective dividend yield is for the investment trust's current financial year. It is indicative only and based on the latest month end mid-market price and the declared and net prospective dividends for the current financial year.

Holdings information

Market Cap excludes cash.

Definitions

Benchmark comparison The benchmark is for comparative purposes only.

Gearing Gearing represents the excess amount above shareholders' funds of total investments (excluding liquidity fund holdings) expressed as a percentage of the shareholders' funds. If the amount calculated is negative, this is known as a "net cash" position.

Discount/Premium If the share price of an investment company is lower/higher than the NAV per share, the company is said to be trading at a discount/premium. The discount/premium is shown as a percentage of the NAV.

NAV The value of investment and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

Cash A company's net exposure to cash / cash equivalents [includes investment in liquidity funds and treasury stocks if held] expressed as a percentage of shareholders funds after any offset against its gearing.

Correlation measures the strength and direction of the relationship between movements in fund and benchmark returns. A correlation of 1.00 indicates that fund and benchmark returns move in lockstep in the same direction.

Alpha (%) a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.

Beta a measure of a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant. Usually the higher betas represent riskier investments.

Annualised volatility (%) measures the extent to which returns vary up and down over a given period.

Sharpe ratio performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

Tracking error (%) measures how much a fund's returns deviate from those of the

benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

Information ratio measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
