

Share price performance (total return)

Dividend history (pence/share)

Please note that this chart could include dividends that have been declared but not yet paid.

Please remember that past performance does not predict future returns. The value of an investment and the income from it can rise as well as fall as a result of market and currency fluctuations, and you may not get back the amount originally invested. Please refer to the glossary for the definition of share price total return.

Company overview

Objective

The Company aims to give shareholders a higher than average return with growth of both capital and income over the medium to long-term, by investing in a broad spread of predominantly UK companies. The Company measures its performance against the FTSE All-Share Index Total Return.

Highlights

A growth and income company with a diversified portfolio of mainly UK equities and a strong dividend track record.

Fund Manager commentary

Investment environment

UK equities rose during January. It was a volatile month, led by defence contractors such as Babcock, given the backdrop of rising defence spending, and miners such as Rio Tinto, as commodities such as copper saw sharp price rises.

UK smaller companies outperformed, with the FTSE 250 Index, the FTSE Small Cap Index and the FTSE AIM Index all outperforming the FTSE 100 Index. This outperformance was likely aided by gains in sterling relative to the US dollar, which benefits companies with substantial dollar-denominated costs such as retailers (which tend to be smaller companies in the FTSE 250 Index and below).

Outside of foreign exchange movements, there was also some modestly positive UK economic news, with November GDP growth and December retail sales both coming in moderately higher than expected. From a portfolio perspective, we saw the benefit of this in a positive Christmas trading update from the likes of sofa retailer DFS.

Portfolio review

The best performers in the portfolio during January included aerospace components supplier Senior, which reported a positive trading update for the final months of 2025 as well as the start of the current year. North Sea oil and gas producer Serica Energy also performed well as the UK gas price rose given the colder weather.

In contrast, the weakest performers included UK building materials producers Ibstock and Marshalls, where the housebuilding and repair and maintenance markets remain subdued.

We purchased a new position in pub group Young's, which reported encouraging Christmas trading alongside a move to the Main Market from AIM. In our view, the pub group looks well positioned given its quality estate across London and the South East. We also added to the existing holding in Mears following the encouraging news that it has won a sizable contract doing housing maintenance for Birmingham City Council. These additions were funded by selling the holding in Tesco, which has performed well. We also have exposure elsewhere in the sector, with holdings in Sainsbury's and Marks & Spencer.

Manager outlook

The last year has been good for the portfolio, with positive stock selection in FTSE 100 companies driving the majority of the outperformance. Small- and medium-sized UK companies have lagged the broader market and remain at lower-than-historic average valuations. We have the ability to invest across the breadth of the UK market, and in our view the best valuation opportunities are currently to be found largely outside of the FTSE 100 Index. For this reason, we have continued to gradually add to the position in smaller companies.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Source for fund ratings/awards

Overall Morningstar Rating™ is a measure of a fund's risk-adjusted return, relative to similar funds. Fund share classes are rated from 1 to 5 stars, with the best performers receiving 5 stars and the worst performers receiving a single star.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Ratings should not be taken as a recommendation. For more detailed information about Morningstar Ratings, including its methodology, please go to <https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx>.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change. Nothing in this document is intended to or should be construed as advice. This document is not a recommendation to sell or purchase any investment. It does not form part of any contract for the sale or purchase of any investment.
