Company overview

Objective

The Company aims to give shareholders a higher than average return with growth of both capital and income over the medium to long term, by investing in a broad spread of predominantly UK companies. The Company measures its performance against the FTSE All-Share Index.

Highlights

A growth and income company with a diversified portfolio of mainly UK equities and a strong dividend track record.

Fund Manager commentary

Investment environment

Following the rebound in UK equity markets in April, May was a marginally positive month as investors remained hopeful of a ceasefire in the Middle East. From a domestic perspective, the economic picture was mixed. April's inflation reading came in below expectations, which helped temper expectations for further interest rate increases. However, employment data raised some concerns, particularly around youth unemployment. Against this backdrop, small- and mid-sized companies with greater domestic exposure outperformed during May, likely supported by a more favourable interest-rate outlook, as these companies tend to be particularly sensitive to expectations around the direction of interest rates.

Portfolio review

The largest contributor to relative performance during the month was Zigup, a flexible vehicle hire company operating in the UK and Spain. The company confirmed that trading for the last financial year was expected to be 'at the top of market expectations', while cash generation was expected to step up substantially as the firm reaches the latter stages of a fleet replacement programme. Halfords was another strong performer. The company reported encouraging trading in its Retail and Autocentres businesses.

Sainsbury's was among the poorer performers, as shares in food retailers more generally were impacted by a potential government proposal to cap the prices of essential food items. While this proposal was subsequently withdrawn, the suggestion was nevertheless unhelpful for investor sentiment towards the sector.

During May, we added to existing holdings in speciality chemicals producer Elementis, media agency Next 15 Communications and commercial flooring producer James Halstead. We funded these additions by selling the holding in pork and poultry producer Cranswick.

Manager outlook

While uncertainty surrounding the economic outlook has undoubtedly increased as a result of the evolving conflict in the Middle East, UK share prices entered May at already depressed levels relative to overseas equities. Consequently, the portfolio was trading on a 12-month historic price-to-earnings (P/E) ratio of just under 13x at the end of May. We view this as an attractive P/E level for businesses which are often market leading, well managed and running conservative balance sheets.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Source for fund ratings/awards

Overall Morningstar Rating™ is a measure of a fund's risk-adjusted return, relative to similar funds. Fund share classes are rated from 1 to 5 stars, with the best performers receiving 5 stars and the worst performers receiving a single star.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Ratings should not be taken as a recommendation. For more detailed information about Morningstar Ratings, including its methodology, please go to <https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx>.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change. Nothing in this document is intended to or should be construed as advice. This document is not a recommendation to sell or purchase any investment. It does not form part of any contract for the sale or purchase of any investment.
