Share price performance (total return)

Dividend history (pence/share)

Please note that this chart could include dividends that have been declared but not yet paid.

Please remember that past performance does not predict future returns. The value of an investment and the income from it can rise as well as fall as a result of market and currency fluctuations, and you may not get back the amount originally invested. Please refer to the glossary for the definition of share price total return.

Performance over (%)	1m	3m	6m	1y	3y	5y	10y
Share price (Total return)	-7.8	2.2	8.0	21.7	50.5	77.7	203.8
NAV (Total return)	-2.2	4.8	8.2	17.3	44.9	68.2	184.0
Reference Index (Total return)	-3.0	4.1	8.2	13.4	40.0	64.2	198.0
Relative NAV (Total return)	0.8	0.7	0.0	3.9	4.9	4.0	-14.0

The Company also publishes the NAV Cum Income and NAV Ex Income with debt calculated at par. The NAV total return above is calculated using NAV with debt at fair value.

Discrete year performance (%)	Share price (total return)	NAV (total return)
31/3/2025 to 31/3/2026	21.7	17.3
31/3/2024 to 31/3/2025	13.5	8.7
31/3/2023 to 31/3/2024	9.0	13.5
31/3/2022 to 31/3/2023	-3.0	-1.6
31/3/2021 to 31/3/2022	21.8	18.0

Fund Manager commentary

Investment environment

US equities fell in March as soaring energy prices as a result of geopolitical uncertainty in the Middle East heightened fears that an acceleration of inflation could lead to interest-rate hikes and a slowdown in economic growth. However, stocks rose sharply on the final day of the month as US President Donald Trump suggested that the fighting could be concluded in two to three weeks.

The US Federal Reserve (Fed) left interest rates unchanged while it noted the uncertainty caused by the fighting in the Middle East.

Fourth-quarter US GDP growth was halved to an annualised 0.7% from initial estimates, mostly because the slowdown in consumer spending was worse than previously anticipated. The performance was the weakest since the first quarter of last year. The unemployment rate ticked down to 4.3% in March, from February's 4.4%. Consumer price rises remained at 2.4% year on year in February, as predicted.

The US dollar strengthened against a basket of other major currencies, enjoying its best monthly performance in about a year and a half.

Portfolio review

In the month under review the Company's NAV total return was -2.2% and the Russell 1000® Value Index total return was -3.0% in sterling terms and the S&P High Yield Dividend Aristocrats® total return was -4.0% in sterling terms.

Stock selection in the financials sector made the biggest contribution to performance. The holding in Citigroup contributed after its share price rose amid improved investor sentiment towards its multi-year restructuring. Not holding Micron Technology also helped relative returns. After a period of outperformance, the low-yielding stock weakened in March, along with other artificial intelligence (AI)-related companies, due to concerns around risks to the supply chain arising from geopolitical uncertainty in the Middle East.

The modest overweight position in the energy sector benefited performance, as the sector outperformed the broader equity market. The holdings in Chevron and energy pipeline company Enbridge were key contributors, as typically more defensive companies outperformed in the risk-off environment. However, having no position in oil and gas firm Exxon Mobil, which benefited from sharply higher energy prices, offset this contribution.

The healthcare position detracted from performance, with the holding in CVS Health underperforming after investors became concerned about the growth trajectory of the company's earnings. Medical device and equipment manufacturers Medtronic and Abbott Laboratories also detracted. Home improvement company Home Depot was another detractor as concerns grew around the effect rising inflation and economic uncertainty would have with consumers postponing home purchases and home improvement projects.

In terms of activity, we closed the long-held position in Citigroup after a period of outperformance. We initiated a position in Bank of America instead, as we like this high-quality business which has been growing its deposit base. We also think Bank of America is likely to benefit from the higher interest-rate environment. Elsewhere, we added a position in insurer Marsh & McLennan after its valuation looked more attractive to us.

Manager outlook

Given the dynamic nature of events in the Middle East, we think volatility will likely remain elevated, and that markets will likely remain highly driven by the news headlines. We will continue to monitor the situation closely, as well any signs of escalation or de-escalation.

Regarding international trade, the implementation of trade tariffs is essentially adding a consumption tax that will be absorbed by some combination of exporters (non-US), importers (US) and consumers and corporates. However, when combined with the fiscal policy laid out in the 'One Big Beautiful Bill' that allows for the expensing of capital expenditure (capex), research and development (R&D) and more generous interest expense deductions, we think there is an interesting offsetting balance in aggregate, which does not even contemplate the longer-term ability of the US to create jobs. In our opinion, it seems that 'uncertainty' has been the biggest headwind for corporates and global trading partners in 2025, not the ultimate level of the trade tariffs.

Marketing Communication

Elsewhere, we are cognisant of the slowdown in the labour market. Below the surface, there are mixed messages. Redundancy levels appear to be modest, but once people are out of the workforce, they are finding it much more difficult to rejoin. Meanwhile, higher interest rates disproportionately impact small business, so the loosening of monetary policy should be helpful to this important employment cohort.

On the corporate side, we do not believe current fundamentals and the forward outlook are as negative as they may be perceived externally. That said, market valuations remain broadly elevated, so we need to remain selective, diligent and disciplined.

We are now about to enter the start of the first-quarter earnings season and expectations are for another quarter of double-digit growth from companies. Looking ahead, consumers will be starting to feel the benefits from the One Big Beautiful Bill over the coming months, which we think could propel consumer spending levels, and thus GDP growth. The impacts of trade tariffs continue to be modest and thus far have not driven inflation as predicted, while employment moves to the forefront as a potential risk following some high visibility redundancy headlines from the private sector.

We believe the companies we hold are well positioned to manage through periods of volatility. We also feel comfortable with the current valuations of these companies, which in aggregate were trading at a discount to market multiples at the time of writing.

We feel the high-quality nature of these holdings should help insulate them against some of the macroeconomic forces at play. From a revenue perspective, we think the historically predictable cash generation and robust balance sheets should lead to continued dividend growth prospects for the year ahead. We continue to seek resilient companies, where macroeconomic tailwinds are not needed for growth, and that have the cash and ability to invest in themselves for the future.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- Using derivatives exposes the Company to risks different from - and potentially greater than - the risks associated with investing directly in securities. It may therefore result in additional loss, which could be significantly greater than the cost of the derivative.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.

Janus Henderson Fund Managers UK Limited was appointed as the AIFM of the North American Income Trust with effect from 1 August 2024. Prior to that date, the North American Income Trust's AIFM was abrdn Fund Managers Limited and all information contained in this document should be considered accordingly.

Not for onward distribution.
